ABOUT ME

I am a Full-stack Developer graduated in Information Technology from Ho Chi Minh City University of Industry (IUH). With a solid backend foundation (Java Spring, .NET) combined with modern frontend skills (React, Next.js), I am capable of building complete, optimized, and scalable systems. My strengths include sharp logical thinking and the ability to quickly grasp complex business processes to translate them into practical technical solutions. I always work with a positive attitude, constantly improving, learning, and adapting quickly. Proficient in using AI as a tool to enhance work productivity, leveraging it for critical thinking to provide optimal solutions and best practices.

EDUCATION

Industrial University of Ho Chi Minh City

2020 - 2025

Bachelor Information Technology | GPA 2.8

SKILL

Backend	Java Spring	.NET	RESTful	MVC				
Frontend	NEXTJS	ReactJS	Redux	React Query	SEO	Antd	MUI	Prime React
Database	MySQL	SQL Server	PostgreSQL	Redis				
Tools	Docker	Github	MongoDB	VPS	Nginx			

WORK EXPERIENCE

FullStack Developer (.NET, NEXTJS) | Công ty phần mềm Nam Việt (VietSoft)

6/2025 - 12/2025

Project: Computerized Maintenance Management System (CMMS)

- Architecture: Developing the system following the Clean Architecture model (Domain, Core, Infrastructure, API), ensuring separation of concerns.
- Data: Database design, Migration management via Entity Framework, and Transaction control to ensure data integrity.
- Logic & Pattern: DI, Utilizing Repository Pattern, DTO, and AutoMapper to separate data and presentation layers, making the source code clean and easy to maintain.
- Performance: Optimizing the system with Async/Await across all processing layers, increasing load capacity and reducing API response time.

Intern Fullstack Developer (Java, ReactJS) | ViHat SoftWare

4/2024 - 7/2024

- Supported the Back-End team in building and maintaining RESTful API services using Java Spring Boot.
- Participated in developing reusable UI Components using ReactJS based on Figma/Sketch designs.

JobHunter - Fullstack (Java Spring , ReactJS)

6/2025 - NOW

- Link Github :
 - + Backend : <https://github.com/SOS-Nu/springrest-sosnu>
 - + Frontend : <https://github.com/SOS-Nu/react-vite-khoaluan>
- Participated in developing reusable UI Components using ReactJS based on Figma/Sketch designs.
- Number of participants: 1
- Role: Coding Fullstack
- Technologies:
 - + Frontend: ReactJS, Redux Toolkit , Antd (Admin), Bootstrap (HomePage), SCSS
 - + Backend: Java Spring , MySQL , Redis (Cache), Kafka (Message broker), Swagger
 - + DevOps : Docker , Prometheus , Grafana
- Highlights :
 - + Security Timestamp: Instantly invalidates all active Access Tokens across all devices during critical security events (e.g., password change, remote session termination), preventing the use of stolen or stale tokens.
 - + JTI Blacklist (Redis): Invalidates Refresh Tokens (to prevent Replay Attacks) and Access Tokens (on logout). Optimized memory usage for large-scale (5M+ users) by enforcing a short, fixed TTL on blacklisted Refresh Tokens.
 - + Engineered an asynchronous notification system. A scheduler (cron) identifies job matches and publishes them to a Kafka stream. A consumer service processes the email delivery, leveraging Kafka for message retries and ensuring fault tolerance

Portfolio | Next.js 15

9/2025 - 10/2025

- Link Github : <https://github.com/SOS-Nu/nextjs-potfolio-sosnu>
- Number of participants: 1
- Technologies:
 - + Frontend: NextJS , Bootstrap,
- Highlights:
 - + Optimized Technical SEO for a Next.js application, implementing robots, dynamic sitemap, and manifest to enhance site crawlability. Leveraged the next/image component to optimize image delivery, significantly improving Core Web Vitals and achieving successful indexing across Google Search and Google Lens.

SoundCloud Clone | Next.js 14

7/2025 - 10/2025

- Link Github : <https://github.com/SOS-Nu/nextjs-sosnu>
- Number of participants: 2
- Role: Coding Frontend NEXTJS
- Technologies:
 - + Frontend: NextJS , MUI, NextAuth ,
 - + Backend: NestJS , MongoDB

E-commerce Bookstore | React.js

1/2025 - 5/2025

- Link Github : <https://github.com/SOS-Nu/react-book-typescript>
- Number of participants: 2
- Role: Coding Frontend ReactJS
- Technologies:
 - + Frontend: ReactJS, Antd,
 - + Backend: NestJS , MongoDB
- Other: Payment via VNPAY , Google Authentication Integration
